

After registering a domain name with a registrar, you need to point the domain name to the Custom Made Sites DNS servers using tools provided by the registrar. This is also known as redelegating your domain name.

Your registrar may be able to help you do this, or alternatively, you may be able to do this yourself by following the below instructions.

ASKING YOUR REGISTRAR TO DO IT FOR YOU

Visit the web site of your registrar and look for their support telephone number or email address. Ask the support team to replace any existing name servers with the following:

- ns1.worldsecuresystems.com (54.236.190.129)
- ns2.worldsecuresystems.com (54.246.209.121)
- ns3.worldsecuresystems.com (54.252.148.151)

It may be easiest to copy and paste the above into an email and send it to the support email address of your registrar.

DOING IT YOURSELF

1. Log in to your domain registrar's control panel.

Use the login name and password that you received when registering the domain name.

2. Look for the option to set or change name servers.

The workspace for managing domain name servers (or DNS) is different for each registrar. See the registrar website or contact the registrar for help.

3. Replace any existing name servers with the following Custom Made Sites name servers:

- ns1.worldsecuresystems.com (54.236.190.129)
- ns2.worldsecuresystems.com (54.246.209.121)
- ns3.worldsecuresystems.com (54.252.148.151)

It takes time for a change to work its way through the Internet. It can take a couple of hours or even a couple of days before this change takes effect.
